

Unified threat management without complexity

Protect your network from viruses, malware and malicious activity with GFI Kerio Control. This easy to administer security solution includes a next-generation firewall and router, intrusion detection and prevention (IPS), gateway antivirus, VPN, and web content and application filtering. These comprehensive capabilities, with unmatched deployment flexibility, make GFI Kerio Control the ideal choice for small and mid-sized WAN businesses.

- ✓ **Eliminate** the risk and cost of connectivity or threat protection downtime with high availability/ fail-over protection. With high availability, if a crash or failure occurs the second machine jumps into action immediately.
- ✓ **Protect** network integrity through deep packet inspection, advanced routing, intrusion prevention and a high performance VPN client.
- ✓ **Industry-leading** web content and application filtering across 141 categories, plus the ability to view individual users' internet activity through detailed reports.
- ✓ **Manage** bandwidth via prioritization and traffic monitoring, Internet link load balancing and limiting access to streaming video and peer-to-peer networks.

Preserve the integrity of your network

- High availability/ fail-over protection eliminates the risk and cost of connectivity or threat-protection downtime. Without High-availability, prime device failure due to a power surge or other cause often leads network administrators to put a simple router in place to reestablish connectivity.
- Protect your servers with deep packet inspection and advanced networking routing—including simultaneous support for IPv4 and IPv6.
- Create both in and outbound traffic policies, restricting communication by specific URL, application, traffic type, content category and even time of day.
- Add a transparent layer of intrusion prevention with Snort-based analysis and a regularly refreshed database of rules and blacklisted IP addresses.
- Prevent viruses, worms, Trojans and spyware from entering your network with optionally integrated Kerio Antivirus service.
- Secure your client-to-site connections with Kerio's high performance, configuration-free VPN client—or use an industry-standard IPsec VPN client, such as those preloaded on mobile devices.

Manage bandwidth to streamline traffic flow

- Prioritize and monitor network traffic to guarantee high-speed transmission for your most important traffic types.
- Distribute Internet traffic across multiple links with Internet Link load balancing, automatically disabling and re-enabling links to ensure continuous Internet access.
- Protect your network from bandwidth-hogging web and application traffic such as streaming video or block peer-to-peer networks.

Improve productivity with industry-leading web, content and application filtering

- Selectively block, allow or log access to 141 continuously updated categories of content and applications with the optional GFI KerioControl Web Filter w/ application awareness.
- View individual users' Internet activity, refine traffic-shaping rules and more with automatic, detailed reports from GFI KerioControl Statistics sent to your email inbox.
- Use insights from reporting to limit legal liability and improve productivity by blocking access to sites, applications and content categories or limiting it to specific time of day, users/user groups and user locations.

Administer quickly and easily—anytime, anywhere

- Manage GFI KerioControl from your desktop or remotely from a tablet device.
- Leverage free migration tools to move quickly and easily from Exchange, IMAP and any other environment.

GFI KerioControl AI

GFI KerioControl AI is an intelligent module powered by GenAI that enables administrators to generate powerful insights and reports. These insights help administrators act swiftly by adjusting their current configuration. The configuration of KerioControl is continually monitored by AI, which suggests adjustments to enhance security and improve performance.
