

Version Update Reference Guide to v10

This guide maps out GFI KerioControl version update pathway to ensure successful update to GFI KerioControl v10 regardless of your starting version.

How to Use This Guide:

- 1 Find your current version in the update paths below.
- 2 Follow the arrows from your version to v10.
- 3 Complete each step in order - *do not skip versions*.

Update Paths by Starting Version

🔄 If you're running 9.3.6p1 or earlier:

Versions: 9.3.6p1 → 9.4.2p2 → 9.4.3p4 → 9.4.5p2 → 9.5p1 → v10

Kernel: #8 #10 #10 #10 #10 #12

⚠️ Critical: The 9.4.3p4 step is mandatory - it resizes partitions needed for later updates.

🔄 If you're running 9.4.2p2:

Versions: 9.4.2p2 → 9.4.3p4 → 9.4.5p2 → 9.5p1 → v10

Kernel: #10 #10 #10 #10 #12

🔄 If you're running 9.4.3p4:

Versions: 9.4.3p4 → 9.4.5p2 → 9.5p1 → v10

Kernel: #10 #10 #10 #12

🔄 If you're running 9.4.5 (any patch level):

Versions: 9.4.5 / 9.4.5p1 / 9.4.5p2 → 9.5p1 → v10

Kernel: #10 #10 #12

🔄 If you're running 9.5 or 9.5p1:

Versions: 9.5 / 9.5p1 → v10

Kernel: #10 #12

Why These Specific Versions?

- 9.4.3p4** Performs critical partition resizing required for all future updates.
- 9.4.5p2** Most stable intermediate version.
- 9.5p1** Fixes stability issues and prepares for v10 kernel update.
- v10** Modern Debian Bookworm kernel with improved performance and security.

Before You Start:

- ✓ Create a complete configuration backup.
- ✓ Document your network settings.
- ✓ Plan maintenance window for multiple updates.
- ✓ Verify hardware compatibility with v10.

- **Cannot skip versions:** each step prepares the system for the next.
- **Versions before 8.0** require fresh installation.

This guide ensures successful update to KerioControl v10 regardless of your starting version.
