

## GFI AppManager Supported Products

GFI AppManager has undergone phenomenal growth and presently provides unified management for six GFI products through its extensible cloud platform, enabling remote management and monitoring of all products and customer accounts from a single interface.

### Cross-Product GFI AppManager Capabilities:

-  **Unified Management:** Control all products through a single, consistent interface
-  **Alerting System:** Create custom alerts with specific parameters across all products
-  **Remote Access:** Securely connect to on-premise appliances from anywhere
-  **Comprehensive Reporting:** Generate reports across all integrated products
-  **User Access Management:** Centralized user management with role-based access control
-  **AI Capabilities:** AI-powered assistant providing contextual guidance for all products
-  **RADAR™:** Machine learning-based anomaly detection across the infrastructure
-  **Automated Backups:** Schedule and manage backups for all supported appliances
-  **Multi-Tenant Architecture:** Efficiently manage multiple customer environments with complete data isolation
-  **Definitions Sharing:** Share IP address groups and URL groups across appliances

### Supported Products:

#### **KerioControl AI**

GFI KerioControl AI is an all-in-one next-generation firewall and UTM solution providing advanced threat protection, content filtering, and secure VPN access.

#### **ClearView AI**

GFI ClearView AI is a comprehensive network monitoring solution providing deep visibility into all aspects of network traffic.

#### **Archiver AI**

GFI Archiver AI provides email archiving, retention policies, and storage management, additionally it has AI integration for archived email compliance scanning.

 **SDK:** Extensible platform architecture with open SDK for future integrations.

#### **KerioConnect AI**

GFI KerioConnect AI provides secure email management, integrated calendaring and scheduling, and multi-device synchronization capabilities.

#### **Exinda AI Network Orchestrator**

GFI Exinda AI provides quality of experience for critical applications through network visibility, traffic shaping/QoS, and TCP acceleration capabilities.

#### **LanGuard AI**

GFI LanGuard AI provides patch management, vulnerability scanning, and network auditing capabilities across multiple operating systems.
