

Municipality of San Bernardo Use Case

Secure, business-style email, calendar & collaboration tools without the high cost.

Customer Success

We have always worked with Kerio using our own Linux server, because we trust the excellent service Kerio provides - Eduardo Miranda (Head of IT)

INDUSTRY

Government

LOCATION

San Bernardo

SOLUTION GFI

KerioConnect

BENEFITS

- Ease of use
- No training required
- Anti-virus and anti-spam
- Secure. Data is on-site
- Competitive pricing

Summary

The Municipality of San Bernardo, a government entity, has been a long time user of KerioConnect. They have been using Kerio Mail Server since 2007 and currently have 1400 KerioConnect licenses and 1400 Anti-spam licenses on their own Linux server.

Why GFI KerioConnect?

When selecting a solution, the Head of IT, Eduardo Miranda, wanted an email server that offered a competitive price, was easy to use, and one that offered ease of implementation and configuration with functionality similar to leading Email providers such as Google and O365.

In addition to usability and deployment ease, Eduardo liked that data was on-site within the organization, and also appreciated the flexibility offered by KerioConnect, allowing him to add tools to the platform as required.

Customer Benefits

KerioConnect provides 24/7 availability of service and ease of platform management for the Municipality. Creating and disabling mailboxes is extremely easy and can be done without any training. Additionally, the municipality was able to get what it needed done at a very reasonable price, as staying within budget was very important for them.

Customer Outcome

The municipality has been able to secure its network through better control over SPAM and emails with virus attachments. This layer of protection has provided a more secure environment and has simplified management for the IT department. KerioConnect has also allowed the team to maintain different mailing lists with the ability to easily manage mass emails and special permissions.

Solution Benefits

- Kerio Connect delivers all the features and functionality for collaboration and messaging without the complexity and high price tag of other systems.
- Kerio Connect can be deployed on-premises or in partner-hosted cloud environments.
- Kerio Connect web-based administration is simple and can even be configured from a tablet.
- Protection against hacking and malicious attacks with SSL encryption, S/MIME, antispam and antivirus tools.
- Automated backup with granular restore options ensure quick and easy recovery from all types of disasters.
