PRODUCT PAIRING

The second question

GFI LanGuard + GFI Archiver AI + GFI AppManager AI

A compliance officer using GFI Archiver AI recently faced a regulatory audit. With three years of tamper-proof, searchable email records, she felt prepared. Then the regulator asked the "second question."

The archive was complete. The infrastructure was not.

"We require evidence that the server hosting this archive was secure. Provide patch compliance records and vulnerability history for the host server and its database for the last 18 months."

GFI Archiver AI had done its job, but the auditor wasn't just looking at the archive; they were looking at the Windows Server and SQL instance underneath it. Without a record of patching and vulnerability management, the integrity of the entire compliance environment was in question.

Without GFI LanGuard, there was no answer. IT could confirm the database was healthy, but they lacked systematic, timestamped evidence of CVE remediation over the required period. The archive was perfect, but the security proof was missing.

The compliance gap

Frameworks like ISO 27001, HIPAA, and GDPR require two distinct forms of proof:

- **Infrastructure Security:** Evidence that systems were patched and vulnerabilities managed.
- **Data Retention:** Proof that communications were retained and searchable.

GFI LanGuard satisfies the first domain, while **GFI Archiver AI** satisfies the second. Running one without the other leaves a critical gap that regulators will eventually find. You cannot be compliant with one; you need both.

With GFI LanGuard, the proof is already written. It automatically documents every scan, CVE identified, and patch deployed on the archive server. When the second question arrives, IT simply exports a pre-built compliance report alongside the GFI Archiver AI records, closing the audit in minutes.

Unified compliance with GFI AppManager AI

GFI AppManager AI unites these tools into a single console. Administrators can monitor GFI Archiver AI's health alongside GFI LanGuard's vulnerability alerts, ensuring that security gaps are remediated before an auditor ever asks. This transformation moves your workflow from a manual scramble to a repeatable, auditable compliance engine.

GFI Archiver AI

Tamper-proof communication retention.

GFI LanGuard

Automated infrastructure patching and documentation.

GFI AppManager AI

Centralized management and visibility.
