GFI KerioConnect® AI, GFI MailEssentials AI, and GFI AppManager AI: Seamless Coexistence

Keep your protection, with the freedom to evolve.

If your organization uses Microsoft Exchange with GFI MailEssentials AI, you already have reliable protection against spam and viruses, as well as filtering for outgoing emails. This setup remains fully supported, and you also have the option to transition to GFI KerioConnect® AI, GFI's alternative to Microsoft Exchange.

GFI KerioConnect AI delivers secure email, calendar, and collaboration features, while GFI MailEssentials AI continues to act as your protection layer, maintaining the same reliable filtering you already trust. No loss in protection. No change in workflow. Just an easier, more cost-effective mail server option.

Centralized management through GFI AppManager AI

Both GFI MailEssentials AI and GFI KerioConnect AI can be managed directly from GFI AppManager AI, a unified cloud platform that simplifies daily administration.

From GFI AppManager AI, IT teams can:

- Monitor and manage multiple GFI products from one place
- Receive alerts and notifications about system status, license expiry, or security events
- Generate unified reports for easier compliance and auditing
- Manage users and roles: Define who can access and manage specific GFI products from a single dashboard.

Registering your products in GFI AppManager AI is optional. No connection to the cloud is mandatory; however, doing so offers clear advantages for those who want centralized visibility and quicker access to insights.

Access new capabilities through GFI AppManager AI

RADAR – Risk Anomaly Detection and Response

RADAR collects and correlates data across GFI solutions— such as mail and monitoring—to detect anomalies and potential threats.

It provides:

- A unified view of your IT environment
- Machine-learning-based analytics for faster threat detection
- Actionable insights and optional automated remediation for common issues

GFI AppManager AI – Your built-in assistant

GFI AppManager AI helps administrators and resellers find answers instantly. It explains settings, troubleshooting steps, and best practices in plain language—no manual search required.

Key benefits:

- Quick, accurate replies in multiple languages
- Time savings when managing several appliances
- Easier onboarding for teams new to GFI products

GFI AppManager AI guides you step-by-step, leaving you in complete control—no automated changes are made.

In summary

If you're using Exchange with GFI MailEssentials AI, you can maintain a secure setup. If you decide
to move to GFI KerioConnect® AI, you can do so smoothly while keeping GFI MailEssentials AI protection intact.

And when you connect your products to GFI AppManager AI, you gain:

- Unified management
- Strong user-level control
- Real-time alerts and notifications
- Intelligent insights from RADAR
- An AI assistant that simplifies day-to-day operations

The choice is yours — on-premises or connected — but the value grows with GFI AppManager AI.
