Archiver AI

AI-Powered Archived Email Compliance

The Hidden Dangers in Your Email Archives

Your email archives can be a vast repository of "dark data," harboring unseen risks that can lead to severe regulatory penalties, legal exposure, and reputational damage. Traditional manual review is insufficient for the volume and complexity of modern archives. GFI Archiver AI illuminates these hidden liabilities by identifying specific compliance, regulatory, and policy violations, even years after the data was archived.

- **Regulatory Violations**: Breaches of GDPR, HIPAA, and other industry-specific regulations (e.g., PII/PHI sharing, cross-border data violations, etc).
- **Data Privacy Risks**: Exposure of sensitive information, such as unencrypted credit card numbers or trade secrets.
- **Policy Breaches**: Internal policy violations, such as the disclosure of confidential company information or inappropriate communication.
- **E-Discovery & Audit Risks**: Accelerates eDiscovery processes through intelligent content classification and tagging, as well as natural language search capabilities. The AI automatically classifies archived items with compliance-relevant rules classes that facilitate legal discovery and audits.

GFI Archiver AI: Your Shield Against Archival Risks

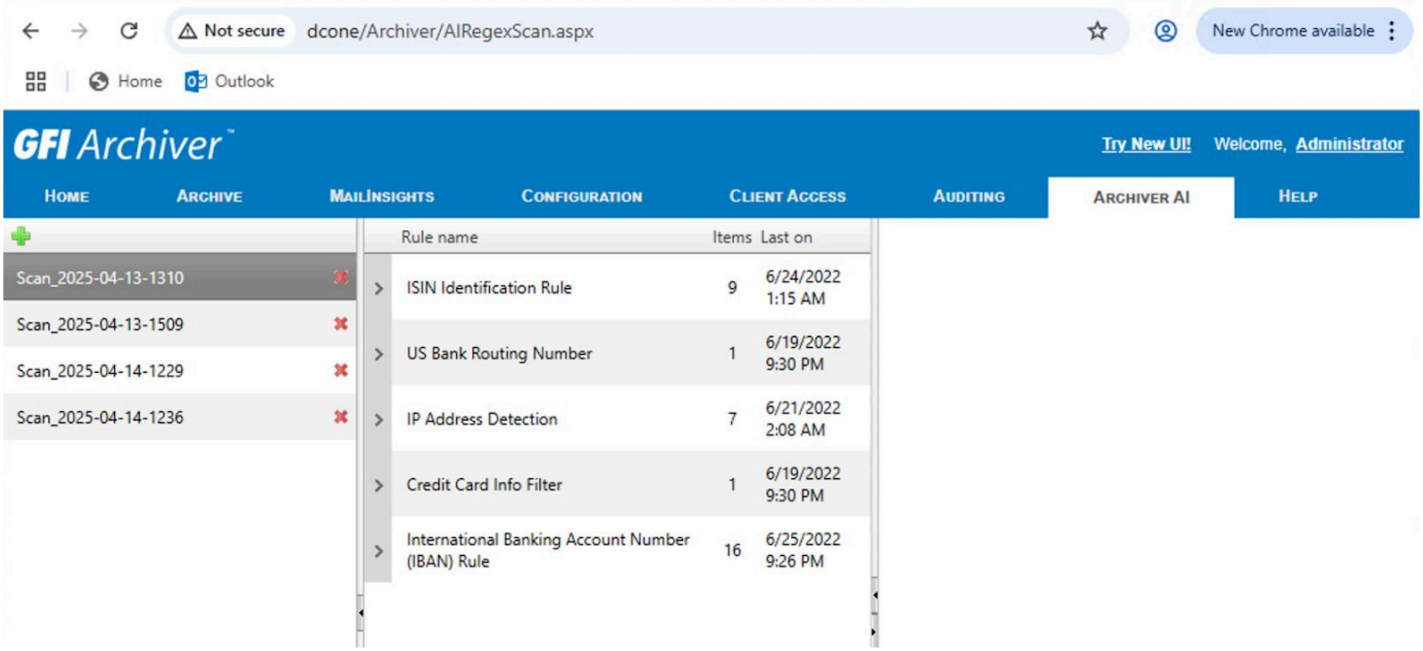

GFI Archiver AI is designed to protect you from these archival risks by acting as an intelligent compliance assistant for your historical data. It provides:

- **Automated Risk Detection**: Continuously analyzes archived emails for regulatory, policy, and data privacy violations, and non-compliant retention.
- **Severity Assessment**: GFI Archiver AI flags violations and provides insights into the severity of the risk, enabling you to prioritize your response effectively.
- **Human-in-the-Loop Control**: While AI provides expert insights, the ultimate decision and execution of actions remain with your human teams, ensuring a balanced and controlled approach to compliance.

This shift from a reactive to a proactive compliance posture strengthens an organization's legal defensibility and reputation, enabling compliance teams to identify and address issues before they escalate.

Key Features: How GFI Archiver AI Ensures Archived Email Compliance

GFI Archiver AI's robust set of features is specifically engineered to manage and secure your archived email communications:

Key Features:

AI-Powered Content Analysis

Compliance-Aware NLP enables comprehensive scans of historical emails for compliance and sensitivity purposes.

Reporting & Insights

Generates dynamic dashboards (e.g., Violations by Regulation) for easy tracking and strategic risk management.

Natural Language

Understands and processes user natural language conversations.

Customized Compliance Checks

Scans and tags archived emails based on your specific regulatory requirements.

Customized Compliance Framework

An intuitive chatbot guides users in creating custom filtering rules tailored to their specific organizational and regulatory needs.

Crucial Note: GFI Archiver AI exclusively deals with historical, already archived email, calendar entries, and files. It identifies policy or regulatory violations and flags them. This includes flagging content whose mere existence in the archive, or its retention beyond specified periods, constitutes a compliance breach (e.g., sensitive PII/PHI retained longer than legally allowed). ***GFI Archiver AI does not automatically apply any fixes; all remediation steps are reviewed and executed by your compliance or legal teams.***

Why Choose GFI Archiver AI: From Liability to Strategic Asset

Choosing GFI Archiver AI means adopting the new standard for AI-powered compliance. Organizations that fail to automate archive compliance risk falling behind in audits and facing escalating risks.

Key Benefits

Proactive Risk Mitigation

Identifies and helps remediate compliance risks before auditors or litigators do, reducing fines and reputational damage.

Operational Efficiency

Automates compliance checks, freeing up IT and legal resources. Streamlined archive management reduces server loads and infrastructure costs.

Strategic Value & Dark Data Illumination

Transforms “dark data” into a verifiable, defensible asset, providing insights for better decision-making and enhanced data protection.

Improved Audit & Legal Readiness

Provides documented evidence of compliance actions, supporting defensible positions in audits or legal proceedings.

User-Friendly & Scalable

Intuitive setup and customized analysis drive adoption across businesses of all sizes.

Purpose-Built for Archives

Specifically designed to eliminate violations already sitting in your archive.

Ready to Illuminate Your Archives?

Don’t let your archived emails remain a hidden liability. Deploy GFI Archiver AI to transform your email archives into a strategic asset.
