Exinda AI NetworkOrchestrator

GUIDE

How to set up GFI Exinda AI

GFI Exinda AI helps you manage your network more easily by using artificial intelligence. With just a few steps, you can enable features that save time, improve performance, and make configuration much simpler, even if you're not a technical expert.

What you need before you start:

- An existing GFI Exinda AI NetworkOrchestrator AI installation (version 7.6 or newer).
- Internet connectivity in the management port.
- DNS configured in GFI Exinda AI.

Setup steps

1 Update your GFI Exinda AI device

Make sure you're using the latest software:

- Go to **Configuration** > **System** > **Maintenance** > **Firmware Update** in your GFI Exinda AI web interface.
- Choose the option that best fits your needs (Install from URL, from downloaded file, from local file, etc.)
- Accept the terms and click Install Image.
- Restart your device when asked.

2 Turn on GFI Exinda AI features

- In the menu, go to **Configuration** > **System** > **Setup**.
- Find the **AI** section.
- Turn on the AI options by checking the Enable checkbox.

3 Use the AI Wizard (Easier network settings)

- Go to **Configuration > Traffic Policies > Optimizer.**
- Go to the AI Wizard tab.
- Type what you want in simple language (for example, “give zoom calls the highest priority”).
- The system will show you what it will do, review and accept the changes.

5 Set up the AI Adviser (Smart suggestions)

- Go to **Monitor > Real Time.**

Go to the AI Advisor tab.
